

USER PERMISSION LEVELS

1. **Participants** are able to take an assessment, but are not able to view their results. This is the default level for most people.

2. **Users** are able to view their results once they have completed an assessment. They can use the password they created to gain access to their completed report(s).

3. **Managers** will have access to their PeopleKeys account. They will be able to view all of the reports in the account and send invitations. They will not be able to purchase or change any account settings. They will have all of the access of an administrator to view reports, without the ability to change settings or purchase assessments.
4. **Administrators** have full access to all of the features in their account.

It is possible to have multiple administrators and managers for each account.
